AR-DV1 SDR Digital Voice Receiver

It's the FIRST software defined digital voice receiver to receive and decode virtually ALL popular digital modes such as: MOTOTRBO™, DMR™, dPMR™, APCO P25, NXDN™, Icom D-Star™, Digital CR, Yaesu, Kenwood®, and Alinco EJ-47U as well as conventional analog signals including AM, wide and narrow FM, upper and lower sideband and CW.

Giving monitoring operators the ability to receive a wide variety of digital and analog frequencies, the AR-DV1 can be used by military, federal, state and local law enforcement agencies, emergency managers, diplomatic services, news-gathering operations, and home monitoring enthusiasts in areas where government, law enforcement, amateur radio operators and public safety agencies use different digital formats.

The AR-DV1 can be operated independently or computer controlled (programmer friendly command list supplied) for easier programming and monitoring. It features:

- Wide band coverage from 100kHz to 1300MHz
- Micro-USB computer interface
- Supply of programmer friendly command list for PC control through terminal software
- Built-in SD/SDHC card reader for audio recording
- Higher 1st IF frequency 1705 MHz provides higher image rejections
- CSV memory data capability for frequency uploads/downloads
- Easy firmware updates through SDHC
- 2000 memory channels (50 channels × 40 banks)
- Alpha-numeric channel labels
- Offset reception and priority channel selection
- Auto-notch filter
- Noise reduction
- Voice inverter
- Discriminator output for external decoders
